

Shasta EDC - What's Happening?

October 11, 2018

Career & Technical Education (CTE) Programs:

*Alive & Well
in our High Schools*

The Shasta Union High School District's CTE Programs have recently been reinvigorated with some new funding. We visited the Shasta, Enterprise, & Foothill high school programs. What we experienced was full classes of engaged teens, working passionately on exciting projects, with equipment that equals that of some of our businesses & the community college. We were thrilled to see large enrollment, committed and very experienced instructors, and many wonderful skills being developed through hands-on learning!

The programs we visited included Drafting (both paper & pencil and computer-aided). Students used a variety of software design tools to create some complex and unique designs. 3D printers were used to print/manufacture designs created by the students. Robotic designs were created for robotics competitions & real live space launches in coordination with NASA programs.

Students in the welding and construction programs were learning all aspects of building structures safely. Our tour was a very impressive way to see how our local high schools are preparing our workforce of tomorrow! They will be ready!
